

## Product Advisory

Reference: CC1711003

Date: December 8, 2017

Wade Antenna has recently become aware of variable weld penetration on a small number of GN 18 tower sections produced in 2017. The matter has been addressed and corrected. Wade Antenna will gladly replace any GN 18 gauge sections meeting the conditions of our limited warranty.

Wade antenna highly recommends that all parties distributing, installing or maintaining GN 18 towers purchased in 2017 take additional care with inspection of the product before sale, prior to installation and after installation.

As always, we recommend installers follow proper climbing safety practices when climbing our products. Please see our Limited Warranty for details on replacement applicability.

Regards,

Ryan Murphy

President

Wade Antenna, Inc.
