D-1338-BB, PB-61-BB, PB-81-BB, PB-82-BB

Description

Our series of UHF parabolic receive antennas covers the entire UHF-TV spectrum. The versatility of these antennas allow the CATV system operator to solve difficult reception problems by using them singly or in an array to attain required gain or beam width. By using grid type, as opposed to solid reflectors they avoid wind loading issues, even in a dual array arrangement. This makes installations at higher elevations permissible with no change in tower construction requirements.

Features

- High gain, narrow beam width
- Broad bandwidth
- Available as single antennas or dual arrays
- Grid type reflector minimizes wind load
- Arrays assemble on the ground using modular individual antennas
- Rugged construction for long life in harsh environments
- Hot Dip galvanized screen
